ABOUT US

Storeplan was founded in 1990 by a father & son who identified a need in the market for quality industrial storage systems, backed up by a strong sense of customer care & becoming trusted advisors to their clients.

Now, more than 25 years later, Storeplan Group Pty Ltd is owned & directed by the same family, but has expanded to become a leading Australian provider of industrial & medical storage solutions nation-wide.

While our supply network & company size may have grown, the original core values remain the same; we base our customer service and reputation on the core values 'Approachable, Personal & Supportive', thus building & maintaining long-term relationships with our customers, suppliers & employees.

Our Head Office is based in Tamworth NSW, and with an extensive network of teams across Australia we are well equipped to service clients' nationally.

APPROACHABLE

In an industry where trust is often founded through experience, we strive to become an easily-accessible team with will and passion to make it happen for you – the way you want it.

We place value on being an open-minded company whilst adding value to our clients through personalised, yet supportive advice.

All staff in this enterprise operate in a transparent association with one another and this is extended further to whoever we touch in business.

PERSONAL

We are constantly founding and nurturing strong human relationships in all dealings. Personalised Solutions are created by discovering our customers ideal solution and injecting this with our access to the latest in advice and industry standards.

Too often, those of us in the business world set aside a foundational principal
'People love dealing with people'.

At Storeplan we create an environment where we draw the best out of our clients in view of creating solutions of benefit.

SUPPORTIVE

Care and guidance are paramount in today's world to both forge and build lasting relationships.

Projects can be frustrating, time-consuming and sometimes seem overwhelming. We know the client doesn't need to experience this – Storeplan offers care and attention to detail on another level.

As a trusted advisor – we can be relied upon to give valuable advice to the best of our knowledge and yet not afraid to adapt in today's rapidly changing world.

SELECTIVE PALLET RACKING

Commonly known as adjustable pallet racking, this is the most popular and economical form of pallet racking because it provides 100% selective storage up to 12.8m in height, utilising valuable air space.

Selective pallet racking can be designed to meet virtually any pallet size or weight and can be used in conjunction with all types of lift trucks.

Manufactured by Schaefer Systems International (SSI), all our Selective Pallet Racking is ISO:9001 certified & meets the current Australian Standard AS4084-2012.

SELECTIVE PALLET RACKING ADVANTAGES

- Great stock rotation
- Good order picking - 100% selective
- Excellent product protection
- Low floor area utilisation - 30% net pallet area usage of overall warehouse area

SELECTIVE PALLET RACKING

CASE STUDY

Project Details

This project involved the Design, Supply, Delivery & Installation of Schaefer I600 Pallet Racking in a new warehouse. With a total of 40 bays installed at 4800-5400H to suit taper of roof, the client now has 276 pallet spaces for storage.

The installation was completed within a very short time frame to allow the client to have warehouse up and functioning the following week. All bays of Pallet Racking have a 2400kg per level capacity & SWL (Safe Working Load) Signs were fitted to the end of each run to comply with current standard AS4084-2012.

TESTIMONIAL

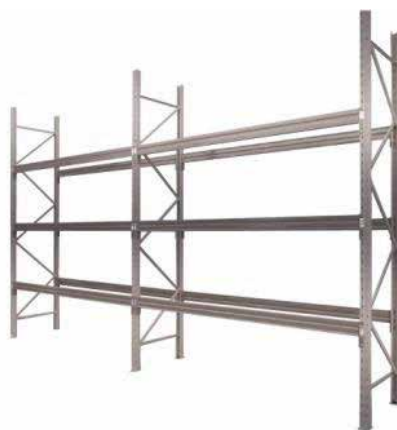

"To the Storeplan Team,

I would like to commend your highly professional team on the prompt service, design layout and implementation of a very workable and effective racking system. Your Project Manager was on site the same day as our initial enquiry, a design and estimation was emailed within 24 hours and when the project was approved, the installation was completed in quite a tight schedule. Your team pulled together and completed the install by the required date and went the extra mile by working back late on Friday afternoon for which we are extremely grateful.

I had used your I600 pallet racking in my Dubbo warehouse which we have found very impressive, so knowing it is of a high quality, cost effective and backed by a professional team we were yet again pleased to deal with Storeplan.

Thanks again". - Jenny (client)

GALVANISED OUTDOOR RACKING

Storeplan's outdoor galvanized racking system is specifically designed to be installed in outdoor environments where conditions are harsh and variable. This system utilises a pre-gal upright frame system with fully hot-dipped galvanised beams ensuring your purchase is an investment worth making.

GALVANISED OUTDOOR RACKING ADVANTAGES

- Hot-dipped galvanised
- 100% selective racking
- Designed to withstand rigorous outdoor use

BEAM SIZES

Size	Minimum Capacity
1372 x 100 x 50 x 3 RHS	2000kg / Pair
2590 x 100 x 50 x 3 RHS	2550kg / Pair

2450mm	838mm
3050mm	838mm
3650mm	838mm
4250mm	838mm
4850mm	1200mm

DOUBLE DEEP PALLET RACKING

A derivative to the Selective pallet racking, the Double Deep system requires the use of a specialised reach truck or an attachment fitted to the reach truck. Whilst achieving an increased capacity of up to 30% above the former, only 50% of the pallets are immediately accessible.

This system however, provides an excellent method of increasing warehouse capacity or when alternative systems are not possible.

DOUBLE DEEP PALLET RACKING ADVANTAGES

- Achieving an increased capacity of up to 30% more than Selective pallet racking.
- Lower cost alternative against Drive-In Racking.
- Does not require high numbers of homogenous pallet types like Drive-In.

2752mm	110mm	3000kg
1381mm	80mm	2000kg
2600mm	80mm	700kg

DRIVE-IN PALLET RACKING

Drive-In Pallet Racking Systems provide maximum storage capacity using the minimum amount of space. It is particularly suited to store very large quantities of homogeneous products, i.e pallets of the same size.

A drive-in system consists of continuous lanes of racking with only a single load and retrieval aisle. Loading and unloading is undertaken by means of counter balance or reach trucks that drive down each lane into the racks.

Drive-In racking operates on the system of First-In Last-Out (FILO), therefore it only suits products that are stored in sufficient volume which require multiple lanes to ensure stock rotation.

DRIVE-IN PALLET RACKING ADVANTAGES

- Operates on the basis of First-In Last-Out (FILO)
- Store very large quantities of homogeneous products.
- Good product protection
- 60% net pallet area usage of overall warehouse area

MOST SUITABLE FOR

Manufacturers of products produced in batches, or in warehouse operation where there are limited product types and pallets cannot be safely block-stacked.

Meat Processing Facility

DRIVE-IN PALLET RACKING

CASE STUDY

Project Details

Racking system:

1 x Drive-In Pallet Racking System 5250H x 13 pallets wide x 2 pallets deep x 3 pallets high.
One lane in this system was 2 pallets high to allow for the refrigerator unit.

1 x Drive-In Pallet Racking System 5250H x 13 pallets wide x 2 pallets deep x 3 pallets high.
One lane in this system was 2 pallets high to allow for the refrigerator unit and another of the lanes will most likely be kept totally clear (ie no pallets to be stored in it) to allow access to a PA door.

This project had to be completed over 2 weekends to avoid any disruptions to the clients daily routine. Our team started onsite at 3am both weekends to ensure the project was completed by the end of the weekend.

TESTIMONIAL

" Just wanted to pass on our appreciation for the ongoing professional approach the Storeplan team have taken in recent projects from the design stage through to the installation. It has been a pleasure working together to ensure a high-quality product is in place, improving the safety for our employees while increasing operational efficiency. It is always good to have local suppliers that can deliver great products and service. Thank you for your ongoing support and we look forward to working together in the future." - Adam (client)

PUSH BACK RACKING

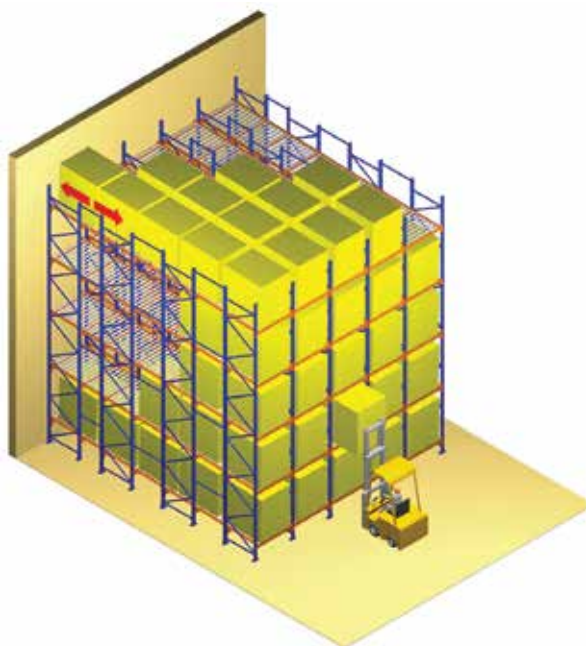

Push Back Racking is used as an alternative to Drive-In systems where there are insufficient similar pallets for a Drive-In system to operate successfully. It can offer high-density storage with different pallet types being stocked at each level, but operates on First-In Last-Out (FILO) principles.

Push Back Racking is used with a cart system of up to 5 pallets deep and used with various pallet sizes. Carts are colour coded to aid stock control and identify empty locations.

PUSH BACK RACKING ADVANTAGES

- High density storage with different pallet types e.g. European, Australian etc
- Operates on First-In Last-Out (FILO) principles
- More picking faces as each lane can be used to store different commodities

PALLET FLOW RACKING

Working on the principle of "parts to the picker", the Pallet Flow racking system provides excellent volume utilisation on First-In First-Out (FIFO) principle.

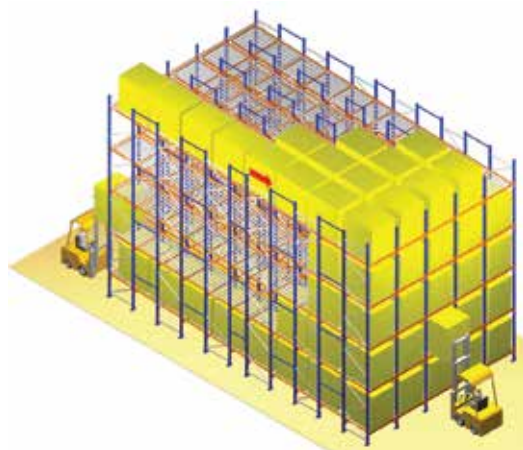

Speed reduction units control the speed of pallets, prevent line build up and pressure. Automatic offload separation gates and entry guides ensure ease of operation. As each lane can be used to store different commodities, more picking faces are available compared to the Drive-In System.

PALLET FLOW RACKING

ADVANTAGES

- High density storage with different pallet types in each lane
- Operates on the First-In First-Out (FIFO) principle
- More picking faces, as each lane can be used to store different commodities

VERY NARROW AISLE RACKING (VNA)

HIGH BAY STORAGE

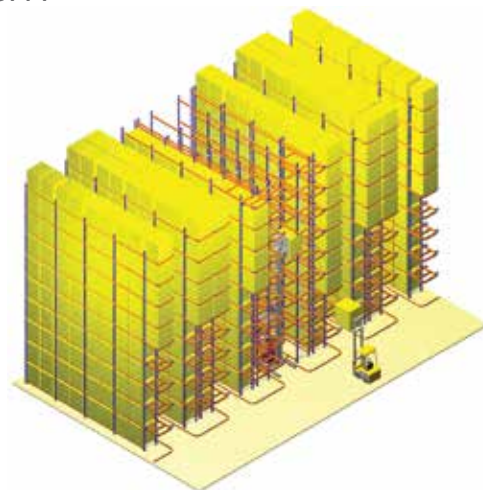

Schaefer Interlock pallet racking systems are designed around the operating tolerances of Very Narrow Aisle (VNA) equipment with aisles marginally wider than the load. Such structures must have a high level of rigidity and accurate manufacturing tolerance. Interlock is designed to meet these requirements.

INCREASED CAPACITY WITH INCREASED HEIGHT

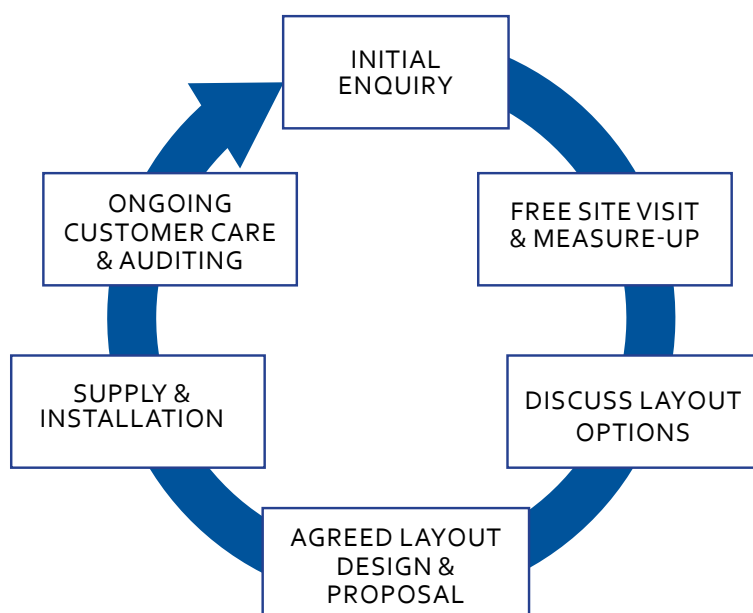

Warehouse capacity can be increased by an additional 40% over Selective Pallet racking by increasing operational height and the reduction of operation aisle.

HIGH-BAY STORAGE ADVANTAGES

- Good stock rotation
- Good order picking: 100% selectivity
- Fast picking rate
- Good product protection
- 50% net pallet area usage of overall warehouse area
- Limited pallet redundancy as system can run at 95%+ capacity
- Uses guide rails or wire guidance for fast movement in aisle

FOR ALL OUR RACKING SYSTEMS

CANTILEVER RACKING

Cantilever racking is specifically designed for the storage of extra-long, bulky or irregular shaped items. It is the perfect storage solution for storing items such as timber lengths, steel lengths, extrusion, pipes, sheet metal, board packs and much, much more.

CANTILEVER RACKING ADVANTAGES

- All cantilever uprights can be used as single-sided or double-sided designs
- Easily customised to your requirements: rows of uprights can be any length required
The cantilever arms can be modified flexibly for stored goods with different heights and loading requirements
- Subsequent adjustments and adaptations can be made without tools
- Available in light duty or heavy duty (up to 1500kg per arm)
- Fully certified to international standards (ISO9001)
- Powdercoat or hot dipped galvanised finishes

If you need to store special materials, or need to meet specific conditions, our expert consultants will be happy to design a customised system for you.

COLUMNS SINGLE OR DOUBLE SIDED	2m – 10m high 3, 6 or 11 Tonne per column, per side
ARMS	600mm - 1700mm length - 1000kg or 1500kg 1800mm – 2400mm length (truss arm) 1000kg
BRACING	600mm column centre to 2400mm column centre spacing

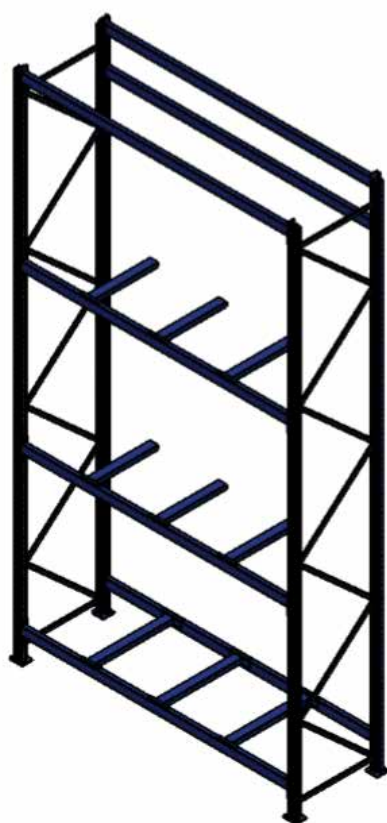

CABLE RACKING

The Cable Racking system is perfect for storing/dispensing a range of different size cables, chains, ropes & other products on drums or reels. The actual customized product consists of a spindle (normally HD Gal pipe 50NB) and a welded steel bracket set (L & R). The brackets are bolted into the upright posts for maximum strength and rigidity.

This system is manufactured in house at Storeplan. It is typically integrated into our Schaefer I600 pallet racking system; however it can be made to suit any brand of racking.

CONDUIT RACKING

Conduit Racking is typically constructed from selective pallet racking that has been configured to form vertical bays within the rack. (see diagram on right)

This vertical design is a protective storage system for conduit, piping, wood, automotive products & other long length items.

The system also protects stock from damage due to compression as the goods are stored vertically.

CONDUIT RACKING ADVANTAGES

- Available both as an open sided rack or a complete unit for heavy goods
- Clear visual stock control
- Increased productivity through easy product access
- Ideal for limited floor space and narrow aisles

ACCESSORIES & RACK PROTECTION

MESH SHELVES

Suits all standard racking types, sizes and configurations. Ideal for all storage including coolrooms and freezers. Does not allow dirt/dust build-up, won't twist or sag, increase lighting and access. Durable & maintenance free.

TIMBER SHELVES (MDF, PARTICLEBOARD, FORMPLY)

Ideal for smaller parts or goods storage, non-palletised items or order picking applications and storage & organisation of stock. Strong and low maintenance.

COLUMN GUARDS

Storeplan's column guards are designed for our Schaefer pallet racking but will fit almost all other types of racking. The guards are 400mm high and are manufactured out of 6mm thick steel plate. Powdercoated orange to match Schaefer racking beams. 4 dynabolt holes for maximum strength.

RACK END PROTECTORS (REP)

Used to protect the ends of a run of racking – available in single entry & double entry (pictured). Made from 6mm thick steel and are 400mm High. Conforms with current Australian Standard AS4084:2012

ACCESSORIES & RACK PROTECTION

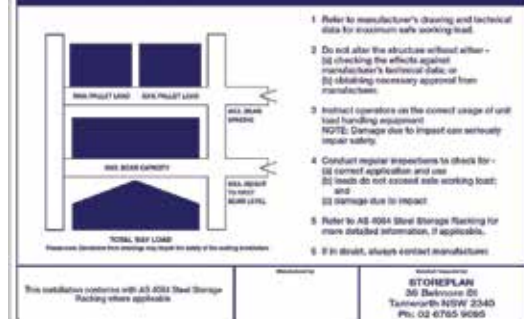

MESH SIDES & BACKING

Creates a safe enclosure for small parts and loose items. Also prevents products rolling off and getting damaged.

SAFE WORKING LOADS

OPERATION AND MAINTENANCE OF RACKING

SWL SIGNS

Customised, high quality alucabond signs which are screen printed for a clear, quality finish. Designed to be screwed to the ends of racking upright frames to effectively display rack load capacities.

SPRING TYPE UPRIGHT PROTECTORS

Most commonly used on a Drive-In Racking System; also great for selective & other types of racking. Manufactured by Schaefer Systems International & are dynabolted into the ground & attached to upright with 'U-Clip'.

ANGLE TYPE UPRIGHT PROTECTORS

Manufactured by Schaefer Systems with 4mm thick steel, these upright protectors are perfect where a low beam level is not required.

INDUSTRIAL SAFETY BARRIERS

The Industrial Safety Barrier is designed to create a safe and appealing separation between vehicles and pedestrian walkways, work areas and costly equipment. This barrier offers a high level of safety and organization in the working environment. The surface mounted structure is available in either 1000mm or 700mm high and comes in 4 length options; 2m, 3m, 4m and 5m.

BENEFITS

- ✓ OH&S Acceptance
- ✓ Superior Strength and finish
- ✓ Fully Modular
- ✓ Optical Lengths to suit all requirements
- ✓ Accessory options
- ✓ Flat pack
- ✓ Ease of installation
- ✓ 5 years warranty

APPLICATIONS:

- ✓ Freight terminals
- ✓ Warehouse application
- ✓ Product areas
- ✓ Shopping centre car parks
- ✓ Loading docks
- ✓ Hospitals
- ✓ Food and wine industries

RACKING INSPECTIONS & AUDITING

IS YOUR RACKING SAFE?

There are many different brands of pallet racking on the market today but not all of them comply with AS4084-2012. Before you purchase your pallet racking make sure it complies with all relevant Australian Standards.

RACKING THAT DOES NOT MEET AUSTRALIAN STANDARDS is not only dangerous to you and your fellow staff but it is also targeted by Workcover and safety inspectors.
Failing to meet the current standards could result in anything from stock loss to major business shutdowns.

SCHAEFER PALLET RACKING is fully compliant and meets all current standards.
AS4084-2012 highly recommends that safety inspections are carried out at least every 12 months.

STOREPLAN has a dedicated team of rack safety inspectors committed to keeping you and your staff safe.
Our team leader has years of experience in safety auditing, reporting and repairing.

LS600 LONGSPAN SHELVING

Longspan shelving is an extremely capable and sturdy shelving system suitable for the storage of small parts right through to heavy, bulky items.

Whether you are setting up a completely new warehouse, fitting out a storeroom or are simply looking for a quality storage system for your workshop, parts store or even your back shed, there are numerous ways in which LS600 Longspan shelving can be configured to suit your exact requirements.

With shelf capacities of up to 500kg each it is hard to go past Storeplan's LS600 Longspan Shelving.

LONGSPAN SHELVING ADVANTAGES

- Strong, durable & robust
- Easy to assemble, clip-together system
- Fully adjustable shelves
- Wide range of accessories available
- Suitable for multi-tier/mezzanine floor systems

APPLICATIONS OF LONGSPAN SHELVING

- Tyre storage
- Archive storage
- Automotive & workshops
- Retail
- Manufacturing & wholesale
- Education facilities storage
- Mining storage
- Home & garage

LONGSPAN SHELVING

CASE STUDY

Project Details

With over 100 bays of LS600 Longspan Shelving along with many other products like the I600 Pallet Racking, RUT Shelving, Galvanised Cupboards, Louvre Panels & Storage bins; Storeplan made the new depot an amazing place to work. The week before installation was due to commence, a road train of quality Storeplan products left our warehouse & arrived in QLD 2 days later; ready for our team to commence install immediately upon arrival.

Testimonial

"We engaged Storeplan to provide a complete design and installation service for a range of industrial storage systems and office furniture items for our new council depot located in South-West QLD. The service we received from the team at Storeplan exceeded our expectations and it was a real pleasure to be able to work on this project with such a friendly, professional and experienced company. The installation team was fantastic to work with onsite and the job was completed well within the required time frame. All of the products supplied by Storeplan are very high quality, aesthetically pleasing and in all, do exactly what we expected of them. We would be more than happy to recommend Storeplan to anyone requiring Industrial Storage Systems.

Thanks again for the great work!" - Grant (client)

SUPER 123 SHELVING

Super 123 shelving is a high quality, unique, bolt-free storage system which can be adapted and utilised in many different ways.

APPLICATIONS

In standard configuration or with the use of a large range of accessories, the system can be adapted to many applications such as:

- Spare parts & workshop storage for the automotive industry
- Tyre storage
- Hanging garment storage for the fashion industry
- Small parts stores for goods ranging from plumbing to electrical items.
- Retail shop & office furnishing

RUT SHELVING & ACCESSORIES

Our RUT Steel Shelving system is a well-priced, quality storage solution suitable for many different applications. RUT steel shelving is able to be configured in such a way that meets your exact storage requirements.

From spare parts storage in a workshop or warehouse to the storage of files and office equipment, RUT is exactly what you need for ultimate organisation and efficiency in your workplace.

ADVANTAGES

- Manufactured in Australia
- Easily configured to suit your requirements
- Made from high quality steel
- Available in three colours - light grey, white or beige.
- Standard shelves are capable of carrying up to 100kg each and are fully adjustable

LIBRARY SHELVING

Storeplan has years of experience in library fit outs – our highly-trained team have successfully completed many library projects across Australia, and our library shelving and furniture range has been well accepted as a quality and aesthetically pleasing solution. Our Australian-made library shelving is constructed using high quality materials for all components included in the system. The shelving range is complemented by a range of accessories, and we source specific furniture items to complete the package to suit the needs of each individual customer.

OUR FOCUS IS TO CONTINUE TO PROVIDE A RANGE OF HIGH QUALITY PRODUCTS FOR LIBRARIES.

MEZZANINE FLOORS

Structural Steel Mezzanine	54
Longspan Supported Mezzanine	55
Pallet Racking Supported Mezzanine	56
Accessories	57

STRUCTURAL STEEL MEZZANINE

Our structural steel storage platform systems are a custom-made, free-standing structure meaning they do not rely on any part of your existing building for support. They come with an engineer's certification and a range of flooring options such as particleboard, plywood and steel. The system can be easily relocated if required – simply take it with you when relocating to your larger premises! Structural raised storage platforms can be tailored to your exact requirements meaning your invested dollars will be utilised in the best way possible.

ADVANTAGES

- Manufactured in Australia
- Comply with WHS requirements
- Double your available storage and floor space by utilising wasted air space
- Avoid financial and time costs of moving premises
- Custom made to suit your exact requirements
- Create extra work and storage areas

CASE STUDY

Emergency Services Provider

RAISED STORAGE PLATFORMS

Project Details

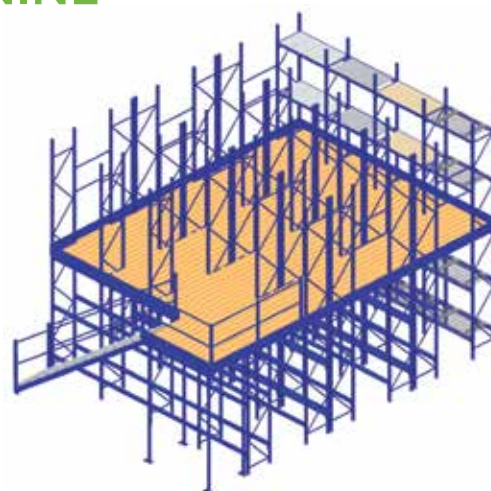

Raised Storage platform:

- 84m² Floor Space achieved
- Finish Floor Level is 3025mm
- Clearance under beams is 2755mm
- Floor conforms throughout to AS1657-1992.
- Load Rating 3.0 kPa. UDL (300kg/m²).
- Stairway, Handrail & Roll Over Pallet Gate

LONGSPAN SUPPORTED MEZZANINE

A sturdy, versatile and cost-effective storage structure ideally suited to those looking to utilise the full potential of their existing warehouse space. A Longspan supported mezzanine structure is an extremely popular option for those dealing with small parts, automotive spares, electrical componentry and mining equipment.

Storeplan offers a range of quality accessories with all our mezzanine floor structures including modular hand railing, access ladders & stairways, sliding or swing pallet access gates and many other customised options.

CASE STUDY

Tyre Retailer

RAISED STORAGE PLATFORMS

Project Details

Raised Storage platform:

- Rated at 5kpa - 500kg/square metre (SWL Sign included)
- Roll-Over Pallet Gate & ball-tube handrail system
- Flooring supplied was 22mm tongue flooring with a 96mm top hat.
- Range of sizes to allow for different size tyres etc

PALLET RACKING SUPPORTED MEZZANINE

Raised Storage Platforms on pallet racking create additional space using standard racking components which have been designed and engineered for absolute safety and maximum use of space.

Racking can be utilised to include shelving underneath, or freestanding shelving can be located between the upright frames. A rack based floor can be easily added to or reconfigured.

ADVANTAGES

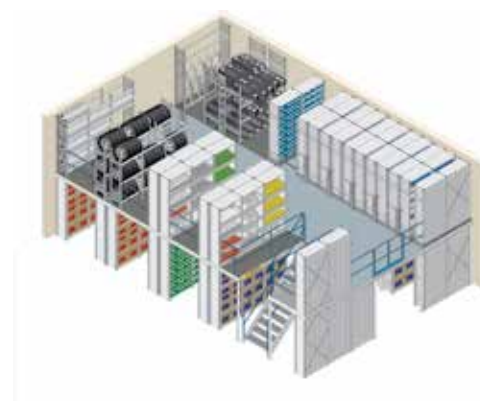

- Increased storage space (utilise air space)
- Increased productivity
- Designed for strength & durability
- Custom designed to suit your exact requirements
- Long-term asset – can be relocated at any time

R3000 SUPPORTED STORAGE PLATFORM

Storeplan's R3000 is a modular storage system that has the capability to be utilised as not only single level storage but can be set up as a complete multi-tier, complex storage system to save space and optimise storage efficiency in your warehouse.

The R3000 flooring system is an open grid mesh system which allows excellent lighting and ventilation. It is complete with its own range of quality accessories such as modular handrails, access stairways, pallet access gates and much more.

SPACE

MEZZANINE ACCESSORIES

ROLL-OVER PALLET GATE

The Roll-Over gate is the perfect solution for providing a high level of protection to your staff whilst also allowing for truck loading access to raised storage platform/mezzanine floor. They are permanently anchored at the loading edge to provide protection from the fall edge at all times. The gate works on the principle of providing hand, knee and kick rails to either side of the pallet load by simply swinging the evenly balanced gate over the top of the load protecting persons from the fall edge, eliminating the risk of fall injury.

FEATURES

- Up-and-over motion
- Space efficient
- Strong and durable design
- Never leaves an exposed edge as a fall hazard.

SLIDING ACCESS GATE

A Sliding Access Gate is designed to allow fork truck easy access to your raised storage platform or mezzanine floor. The gate easily slides back within itself to allow the placement of a pallet or product on the mezzanine with your fork truck.

HANDRAILING

Depending on your individual requirements, you can choose from standard ball tube, vertical bar rail and rail-and-mesh panel, pallet racking or shelving handrail as per of a rack-supported mezzanine floor.

FEATURES

- Constructed from solid steel
- Fully galvanised design
- Provides maximum strength
- Longevity

ACCESS STAIRCASE

Storeplan mezzanine floor staircases are made of steel fabricated stringers with the option of checker plate or grid mesh trends.

All external staircases have a hot dipped galvanized finish with powder coating as an option. Internal staircases are grit blasted and painted unless you tell us otherwise.

The Storeplan project team offers a complete measure, design and installation service for all of your staircase requirements, with one of our trained representatives ready to make a free on-site visit at any stage.

Safety compliance is vital in the design of an access staircase and each Storeplan representative makes sure this is carefully factored into every situation.

ACCESS LADDERS

Storeplan helps you to have easy access to elevated areas such as roof tops, ceiling spaces and maintenance platforms. We offer multiple options including vertical line ladders, caged angle ladders, retractable stanchion ladders, fold down attic type ladders and more.

Ideal for:

- Freight terminals
- Food processing factories
- Timber mills
- Wineries
- Production lines

WORKBENCHES

WHAT OUR CUSTOMERS SAY

"We have engaged Storeplan for the supply and installation of warehouse storage racking, workbenches and elevated roller conveyors during two of our recent warehouse fit outs.

We have found Storeplan's service to be prompt, helpful and reliable with a genuine approach to meeting our design needs. Utilization of valuable space and safety considerations have been at the forefront of their recommendations to our business.

I have no hesitation in recommending their services." - Philip, FEED ADDITIVES SUPPLIER (Client)

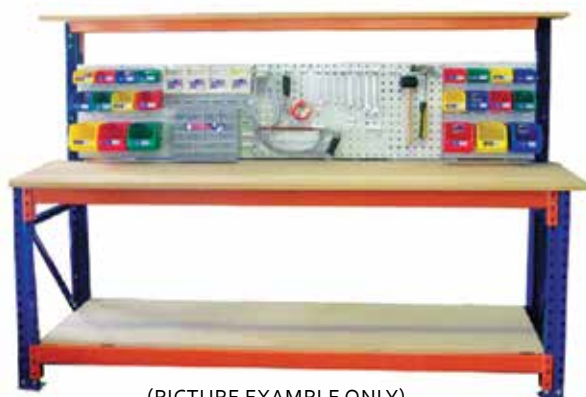

PALLET RACKING WORKBENCHES

A pallet racking workbench utilises custom-sized racking frames and support beams to create a workbench with high load capacities. With our standard 25mm MDF top loads of up to 1000kg UDL can be achieved. Pallet racking heavy duty workbenches are suitable for a wide range of different applications.

Testimonials

“ We engaged Storeplan to provide a complete design and installation service for a range of industrial storage systems and office furniture items for our new council depot located in South-West QLD.

The service we received from the team at Storeplan exceeded our expectations and it was a real pleasure to be able to work on this project with them. The installation team was fantastic to work with onsite and the job was completed well within the required time frame.

All of the products supplied by Storeplan are very high quality, aesthetically pleasing and in all, do exactly what we expected of them.

We would be more than happy to recommend Storeplan to anyone requiring Industrial Storage Systems. Thanks again for the great work! ”

GRANT – MAJOR COUNCIL DEPOT

“ We have used Storeplan to supply equipment to facilitate a massive change in our factory floor layout, and found them nothing but helpful, the product supplied was of a vastly superior make, able to withstand the heavy usage we expect from our equipment. By utilising their range of material handling and storage products, we were able to decrease our project time length and make changes faster, allowing us to focus on efficiency gains in other areas of production.

We found Storeplan to be very helpful and reliable, and showed a genuine desire to meet our requirements.

I would highly recommend their services. ”

JOHN - FARMING EQUIPMENT MANUFACTURER

“ I would like to say a big ‘thank-you’ for the Mezzanine Floor & LS600 Longspan shelving you’ve installed in our main store.

Your approach to the design and installation process resulted in much more storage space being available to us. The shelving & mezzanine not only increased our storage we complied with current Workplace Health & Safety Standards.

From start to finish, your whole team was willing to help out and the installation was completed on time and with minimal disruptions. We’d gladly recommend your team to anyone looking for storage solutions. ”

MICHAEL – EMERGENCY SERVICES PROVIDER
